

Energy Management Policy - Statement

The Top Management of the Bank is committed to responsible energy management, as part of the overall Environmental behavior, in all of its facilities, including both branches and Administration buildings. Specifically, it is committed to the following:

- the continuous improvement of the energy performance and the Energy Management System,
- providing the information and resources needed to achieve the goals and energy objectives, and
- compliance with applicable legal / regulatory requirements and other commitments of the Bank regarding energy use, energy consumption and energy efficiency.

The Bank aims to streamline the energy use by minimizing:

- the energy cost,
- the environmental impacts of harmful emissions by contributing to climate change management, and
- the exhaustion of fossil fuels with the use of alternative or renewable energy sources,

while maintaining its business/operational goals as well as an acceptable working environment for its employees.

Top Management provides the necessary resources to plan activities that lead to a significant improvement in energy performance, supporting the supply of energy efficient equipment and services.

The Top Management in order to accomplish all the above, establishes, implements and maintains an Energy Management System, certified according to the international standard ISO 50001, in order to ensure the correct implementation of this Policy and the continuous improvement of energy performance. Furthermore, Eurobank applies and is certified according to the international standard ISO 14064 for the quantification and reporting of greenhouse gas emissions (category 1-7) as well as gas removals.

Stavros Ioannou

Deputy CEO

Group Chief Operating Officer (COO) & International Activities
